

Competition «My private live»

Natasha Nosova, 11 years old

1. Private life — this is right of every person to be oneself . This is right to choose the friends, style of clothes and hair style. This is right to choose who and how I'd like to be. Private life is only my territory: my feelings, my ideas, my wishes and my responsibility. And only I'm deciding who will go to my private life and in front of whom to close of the door.
2. Private life is very important for me. Without it my life will not full. Only during free relations you can better understand other people and introduce yourself. I respect the right on private life of everybody and at the same time I will protect my privet life from uninvited visitors.
3. Private life is very important for me because I'm free person and I'd like to create my life oneself. I'm unique —only one Natasha Nosova exists on the Earth and I'd like to keep my individuality.
4. I'd like that all other people around myself to respect my right to my private life because this is value for me. I like relationship in my new family — our SOS-family. I like my new friends in class and courtyard. I like to understand that I can give birth to hundreds ideas. I'm ready to give responsibility for my activity. I'm not afraid of making a mistake because I have right to make a mistake.
5. I'd like to protect my life from alcoholism and drugs, from evil and fools, from pretended friends and insincere people.
6. I'm only 11 but I have my achievements and disappointments.
7. My biggest problem is I don't have parents. But this will not stop me. Time to time adults intervene in our life. They try to control everything. I'd need more confidence and understanding.
8. I think we need not to protect but more respect of the everybody's right to private life. It is not depends on age. Everyone fills protectability in the family with trust and friendly attitude between the members. In the family you will be accepting with all your merits and demerits, in any mood as it is.

SOS-Children's village Brovary, Ukraine April 2009
